ORRO®

Cyber Security

Phishing Simulation

Phishing simulation is an all-encompassing solution designed to keep your staff alert to threats and your data safe and secure.

Securely Connected Everything™

Social engineering ploys, or phishing attacks, play a dominant role in cybercrimes, remaining the #1 threat action in breaches.

To safeguard against phishing attacks, organisations must implement effective user awareness campaigns.

With a wealth of experience and exposure to the intricacies of phishing attacks, Orro's phishing simulations allow our customers to establish a baseline for susceptibility to attacks by using simulated real-world scenarios on users. As such, you can track vulnerability to phishing attacks with your employees and run targeted awareness campaigns.

The team at Orro have a comprehensive skillset due to the various security-related managed services we provide. As a result, our exposure and experience in cyber incidents, puts us in a unique position to employ similar methodologies in a controlled manner, to simulate real-world attacks against our customers.

Key benefits of phishing simulation.

- Reduced fraudulent activity through organisational-wide security awareness and training.
- Stronger regulatory compliance due to informed staff.
- Stronger security baseline with benchmarks and reports detailing level of risk exposure with ability to track improvement over time.
- Increased employee satisfaction through increased confidence and awareness of the risks with anonymity maintained.

orro®

How we help you.

› Clear & concise reporting

Our executive analytical reports address your organisation's risk and maturity, as well as technical and operational mitigation strategies to shift end-user behaviour.

› Quality profiling

We harvest information against the target through open web information gathering. With this intelligence, our team creates a profile to assist with familiarity vector exploitation against end-users.

› Drafting highly targeted campaigns

Highly targeted campaigns that emulate real-world attacks are orchestrated and sent to users, which enables our team to gauge user awareness levels and define a path for building more robust defences.

› Informative user content

Our informative user instruction videos help address the problem immediately and improve contextual awareness for users.

Orro National Cyber Defence Centre

With Security Operations Centre (SOC) Analysts working alongside Pen Testers, Incident Responders, Security Consultants and Architects, we provide a more holistic approach to securing your business.

80+ cyber security experts

20+ years' experience
